Reverse Engineering

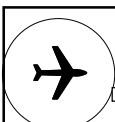

**Digital Flight**

FAA National
Software Conference

**Reverse Engineering
Within a DO-178B
Framework**

Presented by: Cheryl Dorsey
Digital Flight, Principal
email: dorsey@erols.com

Slide
1

**Digital Flight**

- Is your product team retiring to Florida?
- Has marketing said you have a 100k SLOC Level A Certifiable System and you don't know what level A is?
- Customers finding all your undocumented features?
- Is your technical product guru blackmailing you?

Reverse Engineering

 Digital Flight

Then
Reverse Engineering is for you !!!

Slide
3

 Digital Flight

Presentation Objectives

Understand:

- what is reverse engineering, why it is used, and the relative pros and cons to using this approach
- what's next after going backwards
- how to use DO-178B Annex Tables A-1 through A-10 with respect to reverse engineering process

Reverse Engineering

 **Digital Flight**

What is It ?

Reverse Engineering:

"engineering process of understanding, analyzing, and abstracting the system to a new form at a higher abstraction level." (Source: Chikofsky and Cross)

Design Recovery:

"a subject of reverse engineering in which domain knowledge, external information, and deduction or fuzzy reasoning are added to the observations of the subject system to identify meaningful higher level abstractions beyond those obtained directly by examining the system itself." (Source: Chikofsky and Cross)

Slide 5

 **Digital Flight**

Why Reverse Engineer ?

- Product already exists, none or little documentation (COTS)
- Product exists but after years of maintenance, it has become too fragile to upgrade or fix
- Prototype code exists (works, but not sure why)
- Developed to one standard and need to upgrade baseline to another standard (e.g. DO-178B)

Reverse Engineering

**Digital Flight**

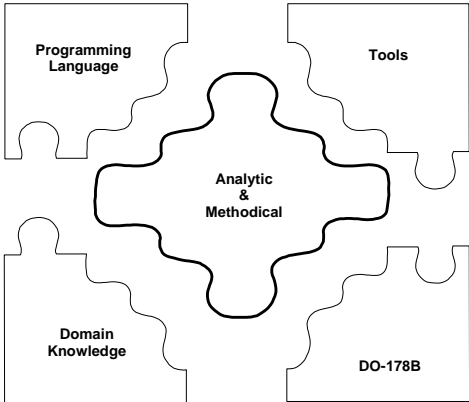

Successful Reverse Engineering Projects

- GE Spare Bill System
- F-14A AWG-9
- TCAS (IV&V-- Really reverse engineered)
- SPY-1A Weapons Control System
- Power Distribution System
- FAA approved ground system
- FMS
- COTS Operating System(s)

**Digital Flight**

Skills Required

Slide
8

FAA National Software Conference, June 2001

Reverse Engineering

**Digital Flight**

What Makes It Work?

- rigorous well defined process in place
 - plans
 - templates
 - tools
- multidiscipline team all with strong cognitive ability
- communication
- access to the experts (if they still exist)
- experience
- good working knowledge of DO-17B

Slide
9

**Digital Flight**

It's All In The Details

- code is overly complex
- poorly and incorrectly documented
- unused sections/pieces
- abstract up is much harder than decomposing
- automated approach has limited usefulness

Slide
10

FAA National Software Conference, June 2001

Reverse Engineering

 **Digital Flight**

Common Things Found !

- Variables not initialized
- Problems with pointers
- Data not being defined consistently
- Data not being used consistently (type, units)
- Incorrect algorithms
- Parts of software that do not work together
- Startup (warm, cold) not thought through
- Scenarios not thought through
- Incorrect order of events (especially after error handling)
- Built in test is not built in
- Data being produced or passed but never used

Slide 11

 **Digital Flight**

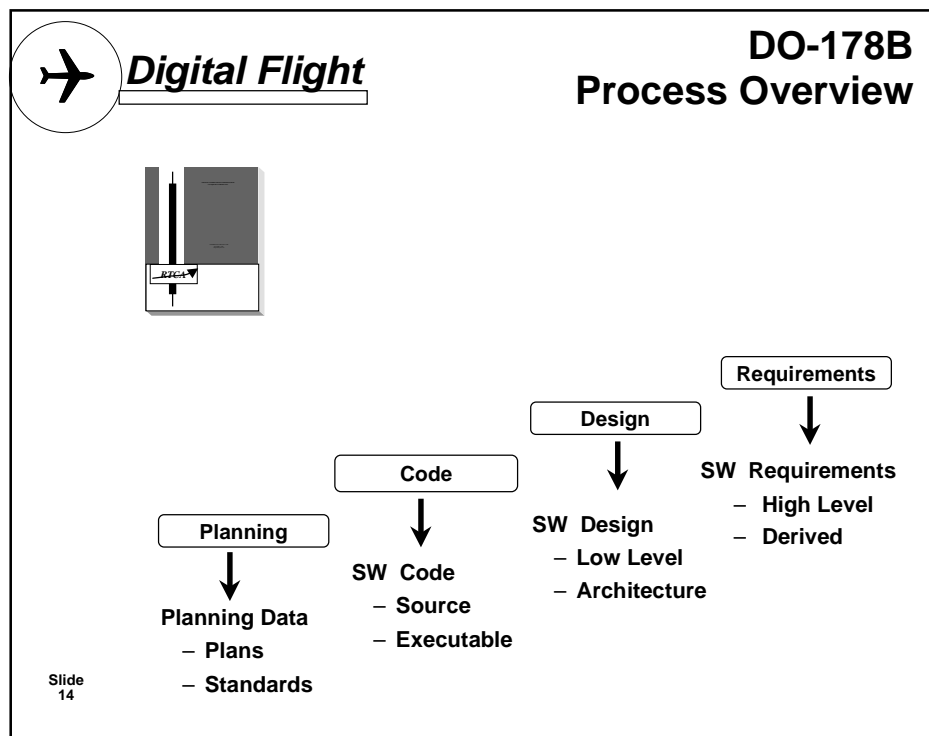

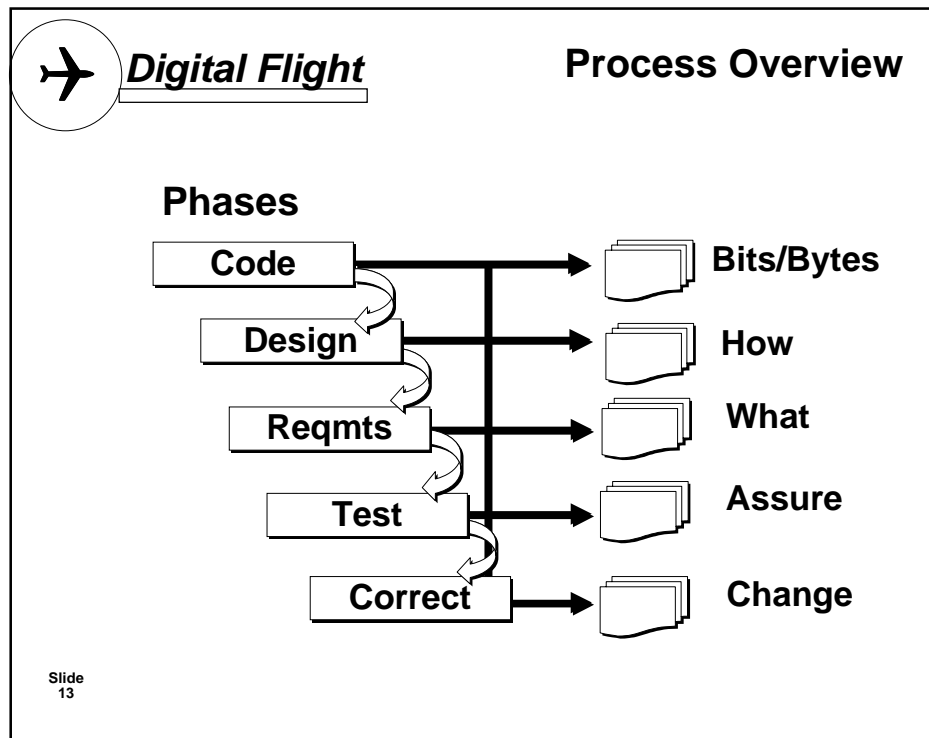

Advantages of Reverse Engineering

- Can be cost and schedule effective
- Low cost compared to developing and incorporating changes
- Re-institutionalize technical knowledge about a product
- Finds more esoteric errors
- Springboard for next-generation product

Trace Data

Total Score Result (TSR)	Software Level	Software Level	Software Level	Software Level
Score Range	A	B	C	D
90% - 100%	HIGH	HIGH	MEDIUM	LOW
80% - 90%	HIGH	MEDIUM	MEDIUM	LOW
70% - 80%	MEDIUM	MEDIUM	LOW	LOW

Reverse Engineering

 **Digital Flight**

Summary

- Reverse Engineering life cycle model can be formally implemented.

- Not easy but with the right process and people it is doable.

- There are advantages from a safety perspective (it finds stuff)
